

# The regional gaps in university admission

Hiroshima University High School, Fukuyama

## <The cost to take an entrance exam of a university in a city>

## <Systems of entrance exam of universities>

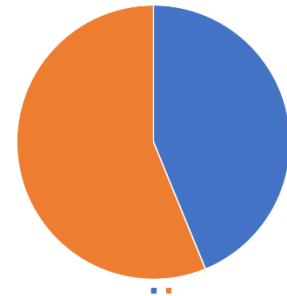

### The case of Japan

- Common test & Original test of each university
- Recommended admission exam
- Documents of personal information and interview

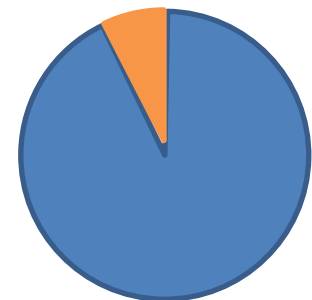

### The case of Thailand

**TCAS** (a system consisting of five types of exam)

	contents	cost
1	Documents of personal information	50 baht
2	Recommended admission examination	Decision of University
3	The same achievement test all at once	500~1100 baht
4	GPA, O-net, GAT/PAT are considered	150 ~300 baht
5	Each university's original exam	Decision of university

Each university's original exam (orange)

## <The gap of incomes and expenses between Bangkok and the countryside>

	Bangkok	East	Northeast	North
Regional share of GRP(%)	47	17	10	8
population composition(%)	23	8	28	17
GRP per person (baht)	410600	432000	70906	No data

There is a large economic gap between the city and rural areas!

TCAS becomes one of the solutions.

### Our suggestion

Japanese government should make a new entrance examination system, not influenced by their economic background or living environment.
