

Wells and Smiles for Cambodia

Cambodia Wells Project

ABOUT CAMBODIA

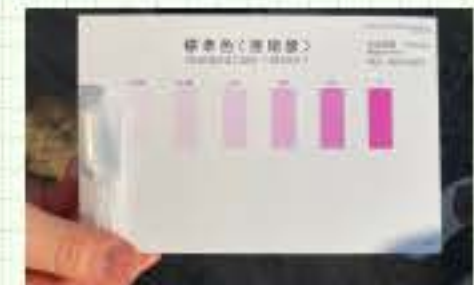

Capital : Phnom Penh
 Population : About 16 million
 Language : Khmer

Water for domestic use is difficult to obtain and water from reservoirs is used.

↓
 Health problems are occurring.

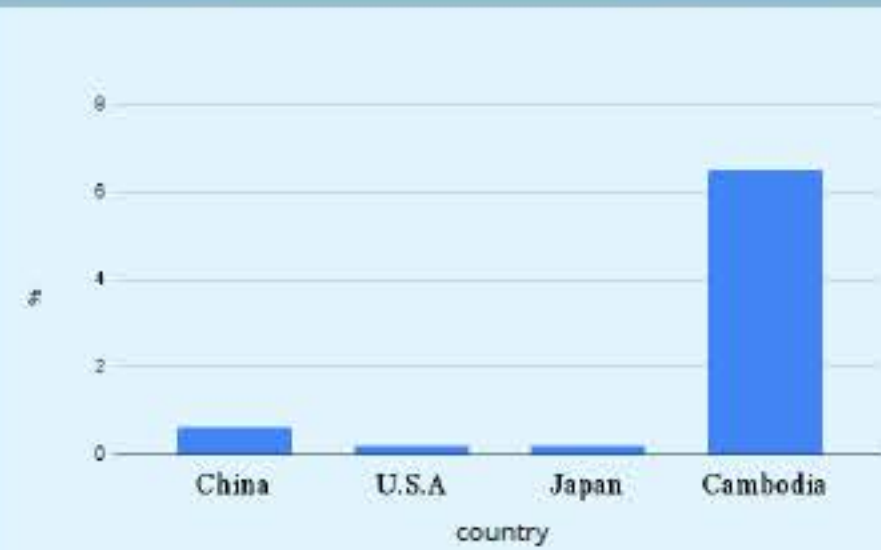

By digging wells, people can get clean and safe water to use every day, which protects people's health and save lives.

We bring kits from Japan to test the water quality and investigate the water coming out of the dug wells.

Water in Cambodia

Graph comparing mortality due to unsafe water, poor sanitation
 【Unit: per 100,000 population】

OUR AIM

- Delivering wells and smiles
- Conduct activities that are needed by the local people
- Do what we can

TRAVEL TO CAMBODIA

Since 2017

We have traveled in person to Cambodia and delivered 8 wells in total.

March 2024

We plan to go to Cambodia and dig 2 wells together with local people to obtain water which is necessary for daily life.

ACTIVITIES

Bazaar

A bazaar was held at the school festival to raise funds to dig a well. This year, we were able to collect 240,000 yen and we can dig two wells.

Furugi de Vaccine

By collecting used clothes from school, packaging, and sending them, each bag can deliver vaccines to about 5 children.
