

## Introduction

Our aim is to address the increasing number of children who are not attending school in Japan, with a focus on solutions for improved education

Number of children not attending school

Learning status of children not attending school

## Japanese Government Policies in Education and Issues

### 【Japanese Government Policies】

- special schools for non-attendance
- free schools
- online home study systems
- night junior high schools

### 【Issues】

- many children are not able to receive suitable education
- approximately 45% of the families cannot afford the cost of free schools, 400,000-500,000 yen per year.

## Solution

### - Home Tutoring System -

### 【Education for Children out of School】

in any situation, including young caregivers, poverty, bullying, etc.

### 【Survey】

Q:What support do you think would make it easier to attend school?

A:(Sort by number of responses)

1. Calling from friends
- 2. Individual tutoring**
3. Calling from family members

### Pros

at home

Device is unnecessary

### Cons

cost

Lack of teachers

### 【Lack of Tutors】

• hiring university students from the Faculty of Education and other majors as tutors

⇒ **children:** easy to become familiar with tutors because they are around the same age. getting opportunities to know what it's like to study at a university.

**college students:** getting teaching experience  
getting college credits

### 【Cost】

• establishing a home tutoring system as a national policy

⇒ the burden won't be place on families

• raising funds to support institutions for children who are not attending school

## Conclusion

When providing support, it is important not only to seek for the child to attend school, but also to help the child to think about his/her own career path and to become socially independent.
